Expert Opinion

on DNA Analyses

1 Order

Based on an agreement between the Procuraduría General de la República, Mexico, and the Gerichtsärzte am Institut für Gerichtliche Medizin, a written expert opinion on forensic DNA analyses concerning missing person Alexander Mora Venancio related to Case ██████████ given.

2 Case circumstances

On November 13th 2014, one bone sample (sample ID 27-29102014) was handed over to our laboratory ██████████ PGR.

On November 14th 2014, 134 DNA profiles related to 42 family groups were made available by ██████████ PGR.

In addition, on November 20th, 2014, 135 DNA profiles related to 42 family groups were made available by Mercedes Doretti, EAAF.

5.5 Based upon allele frequency data for the Canecasian population established by the GMI, the **nuclear genetic data are at least 1 billion times more likely** to be observed under the scenario that the unidentified remains originated from a biological son of the father (Ezequiel Mora Chora) and a biological full brother of the full brothers (Omar Mora Venancio and Hugo Mora Venancio) of missing person **Alexander Mora Venancio**, as compared to the unidentified remains originating from an unrelated individual.
